DRAGONBOARD- Wall & Ceiling Projects

America's Team- the Dallas Cowboys are building a 3-story observation building at their practice facility in Irving, Texas. The organization chose DragonBoard for the exterior sheathing of the structure to provide a high impact moisture/insect/mold resistant wall that would last in the harsh environment. In addition, DragonBoard was used for ceiling panels in the third story, which is open air; this provides a ceiling that will withstand the elements. A tough product for a tough environment!
